

## Graphing calculators

Handheld graphing calculators will be required for all Upper School math classes beginning this fall. We recommend TI-84 plus CE calculator, but others will work as well. You do **not** need to purchase a new calculator if you already have one. If you have any questions about if whether your calculator is suitable, please contact math department chair [Shannon Rush](#).

Graphing calculators can be a significant expense for families. The school will offer the recommended TI-84 plus CE at a discounted price of \$123 to all families. Students who qualify for financial aid may receive an award for half the cost for the purchase of one graphing calculator during their time in the Upper School. If you would like to purchase a calculator through the school, please use the [calculator order form](#) to place your order by **September 7**. The bookstore will **not** maintain a stock of calculators, so this is your one time to order a graphing calculator through Catlin Gabel.
